Summary

SOC analyst intern triaging Microsoft Sentinel alerts and investigating phishing and business email compromise in a corporate environment. Builds detection and automation tooling in Python, including an explainable intrusion detection system evaluated on 2.5 million network flows. M.S. in Cybersecurity; CompTIA Security+ exam scheduled November 2026.

Technical Skills

Identity and Access: Active Directory, Group Policy, Okta SSO, Entra ID, role-based access control

Security Operations: Microsoft Sentinel, KQL, Threat Explorer, email header analysis, SPF/DKIM/DMARC validation, phishing and BEC investigation, incident escalation

Automation and Engineering: Python, FastAPI, REST APIs, JSON, SOAR (Tines), PostgreSQL, SQL, Git

Systems: Windows Server, Linux (Ubuntu Server), macOS, TeamDynamix

Networking: TCP/IP, DNS, DHCP, OSI model, network ports and services

Frameworks: MITRE ATT&CK, NIST Cybersecurity Framework (CSF), Zero Trust Architecture (self-study)

Experience

Cybersecurity Analyst Intern, SOC Operations | Passion Vertex LLC | August 2026 - Present

- Triage 35 to 50 security alerts per shift in Microsoft Sentinel, protecting developer workstations and recruitment teams from social engineering.
- Assess blast radius for flagged accounts by reviewing Entra ID sign-ins, active sessions, and mailbox forwarding rules to prevent lateral movement.
- Investigate phishing and business email compromise (BEC) attempts, with 30+ cases handled to date, using KQL queries across audit, sign-in, and email log tables.
- Escalate critical incidents within a 15-minute response window, coordinating with the internal IT security team and documenting each step in tickets.

Front Desk Lead | GVSU Parking and Transportation Services | September 2023 - May 2026

- Resolved login and access issues for staff and students on a portal integrated with university SSO, including duplicate accounts created during the SSO migration.
- Managed high-volume TeamDynamix queues, resolving close to 30 cases daily with detailed documentation and training incoming student staff.
- Built a Tines SOAR automation that replaced a manual process taking about one full workday per week for a 20+ person team.

Featured Project

xIDS: Explainable Intrusion Detection System | GVSU Capstone | 2025 - 2026

- Designed a three-tier detection pipeline: Isolation Forest flags deviations from benign traffic, XGBoost classifies attacks across 7 classes, and TreeSHAP explains the top features behind each alert.
- Trained on CICIDS2017 (2.5M flows, 52 features) with a stratified 64/16/20 split and Optuna tuning (20 trials); 96.9% macro F1 on the held-out test set.
- Enriched high-confidence alerts with Claude API explanations and AbuseIPDB reputation checks, using a 24-hour PostgreSQL cache.
- Built a FastAPI backend with JWT authentication and role-based access for admin and analyst users; analysts record true positive, false positive, or suspicious verdicts with their username.

Education

M.S. in Cybersecurity | Grand Valley State University | Conferred May 2026

B.Tech in Aeronautical Engineering | Vel Tech University | Conferred 2022

Certifications and Training

- CompTIA Security+ (in progress; exam scheduled November 30, 2026)
- Tines SOAR Core Certification
- Tines SOAR Advanced Certification
- TryHackMe Security Analyst Level 1 (SAL-1)
